

Project Manager

 PJM: Project Manager  Madrid, Spain  Senior

ERNI has recently created a new department to manage all the Development projects.

This department is based on project managers, business analysts and processes engineers.

The main responsibilities of these project managers in the management of projects include the creation of clear and achievable project objectives, the construction of the project requirements, and the adequate and efficient management of the limitations at their disposal, such as the cost, the execution time, the scope and the quality of the final delivery.

Your Tasks

Define and guarantee, based on the need to be covered, the objective, scope, plan, approach, and budget initially necessary to reach the milestones that are requested.

Participate in the methodology to be used and in the generation of the assigned final budget, ensuring its correct use to achieve the objectives of the assigned projects

Coordinate and communicate to the Stakeholders of the project, that is, to the managers and users of the business, to the analysts, to the business experts and to the IT / Technology managers of the projects they are responsible for.

Anticipate the logical sequence of all project activities, including the identification of the critical path and the milestones of value, to achieve the objectives of the project based on the agreed scope. Anticipate risks (along with your mitigation plan) and key success factors.

Give support for failing builds, repositories.

Check that packages automatically created are correct with their checksum, etc.

Your Profile

Fluent English: Written and Spoken.
